## State-of-Play on Open Data - 2018

### BARRIERS

#### Publication

- Governance
- Legal
- Organisational
- Technical
- Financial
- Other

- *Lack of policy framework and the coordination*
- *Greater public awareness of the politicians on the open data and their potentials could help increasing the level of publication*
- *Ensuring that laws are properly implemented*
- *Lack of organizational capacity*
- *Data quality*
- *Additional financial costs for some public sector bodies to publish data*

#### Re-use

- Awareness
- Availability
- Legal
- Technical
- Other

- *Public awareness, however this is gradually improving*
- *Availability of data is slowly improving*
- *Data quality and keeping data up-to-date*
- *Ensuring that the loss of financial resources of particular public bodies does not endanger the provision of service, including collection and distribution of data*

### BEST PRACTICES

#### Publication: Dynamic access to information with Multi-format download option

*The Croatian Bureau of Statistics is one of the biggest Croatian Open Data publishers with 79 datasets, mainly published in "dynamic" way using aspx framework. All these datasets are highly user-configurable (including precise filtering, sorting and downloading). Downloads are possible in various open or close formats including .json, and 8 kinds of different .csv formats.*

#### Re-use: HAKmap

*HAKmap is the most accurate Croatian GPS application with additional values in the field of transport information, like POI's including address book of health institutions and private practices published by Croatian health insurance fund. This multiplatform application (Android, iOS, interactive web version) is very popular in Croatia because of its accuracy together with sublimed local transport information.*
