ADDRESSING BARRIERS

Awareness

To address the issue of low awareness of open data publication and re-use, Slovakia organized conferences, a newsletter, and working groups.

Availability

Barriers for re-using open data in Slovakia are that the most requested datasets are not always available and that datasets are not always updated. Therefore, Slovakia increased the communication with all data curators (25) and offers financial support (national projects and public calls).

Technical

Slovakia released a project to create a new data portal and has started measuring the quality of data.

OPEN DATA RE-USE

The national open data portal of Slovakia provides a designated area for open data use cases to provide further insight and inspiration into how open data can be used to create services, applications, and products.

Currently, the page shows only 4 open data applications. When clicking on an application, the visitor does not only receive information about the application itself, but also information about what open datasets are used to develop the application and a direct link to these datasets.

There is no clear overview on how open data is being re-used in Slovakia and how political, social, economic and environmental, impact is created.
