Quick facts

	Company:	MOOSE
	Sector:	Environment
	Product / service:	Website
	Type of data:	Oceanic data
	Origin:	France

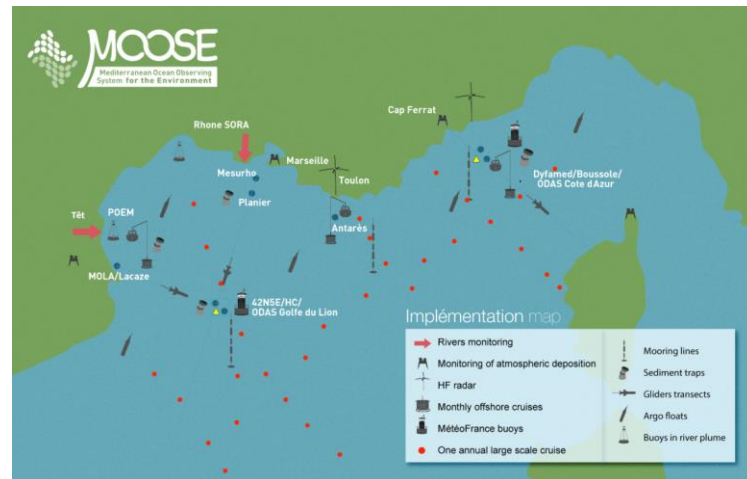

Description

MOOSE integrates multiple variables to detect and identify long-term environmental anomalies and to define effective health indicators. Its goal is to monitor seasonal or interannual variabilities as well as the impact of extreme events that control physical and biogeochemical fluxes and marine biodiversity.

Benefits

Transparency – The website enables people to monitor the variability at different space and time scales to identify long-term environmental anomalies in the Mediterranean basin.

How open data is used

The oceanic data is validated using international protocols that covers sensor preparation as well as systematic control of the data, archived on the Sea Scientific Open Data Edition repository. Real-time data are transmitted to public databases for its use.
