Quick facts

- Company: National Transport Authority
- Sector: Transport
- Product / service: Application
- Type of data: Data
- Origin: Ireland

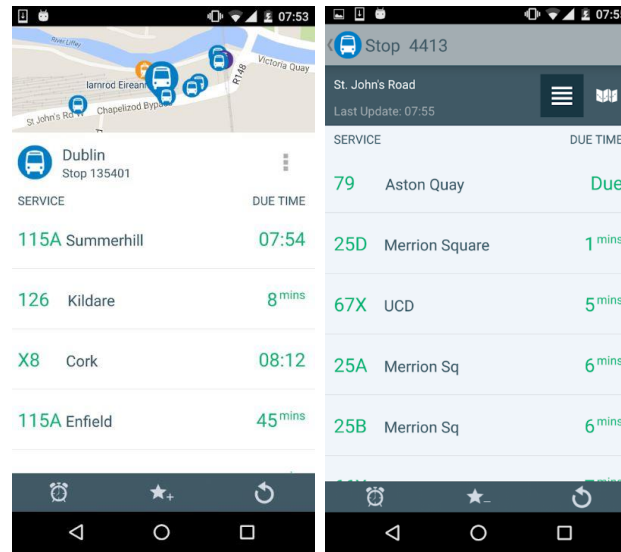

Description

With Real Time Ireland App, users receive real-time information on Irish public transport. The application allows users to navigate through stops and routes and to search by route or by stop number. In addition, users can add favourites, which enables quick access to real-time travel data.

Benefits

- Real Time Ireland App allows users to choose smart travel options by providing access to reliable, real-time information about the next bus, tram, or train.
- The application reduces waiting times at stations and stops because users can activate alerts for approaching busses or trains.
- This application supports using public transport as an efficient alternative to private car commuting.

How open data is used

- The application uses data from national public transport providers, including schedules and timetables, for the application.
- For the real-time tracking of movements, data is generated from the Automatic Vehicle Location (AVL) which has data from the public transport providers of Dublin Bus, Go-Ahead Ireland, Bus Éireann, DART, Iarnród Éireann, and Luas services.
