

URL <https://amires.eu/>**Quick facts**

 Company:	Amires
 Sector:	Government & Public sector
 Product / service:	Website
 Type of data:	Governmental open data
 Origin:	Kenya & Czechia

**Description**

EU4Region is a visualisation platform that maps the state of cohesiveness and inclusion of EU regions through funding. The platform seeks to explore the absorption capacity of EU funding and helps to identify unknown patterns, causal relations and changes resulting from the injection of EU funds in various regions. The ambition of Amires is to facilitate evidence-based policy-making by identifying regions that are lagging behind and encourage their participation in future funding programs.

Benefits

- Insight in the effectiveness of policies and funding.
- Amires contributes to transparency and accountability of EU spending.

EU projects – Technology Scouting – Business Innovation

**How open data is used**

Amires uses mainly open data from CORDIS (EU Research Results) and Eurostat. The organisation is a finalist in the EU Datathon 2020 and uses open data from the aforementioned sources. The open data can be used in research to find a causal-relationship between the spending of EU funds and effects.
