## Quick facts

 Company:	Government of Switzerland
 Sector:	Environment
 Product / service:	Website
 Type of data:	Geodata
 Origin:	Switzerland

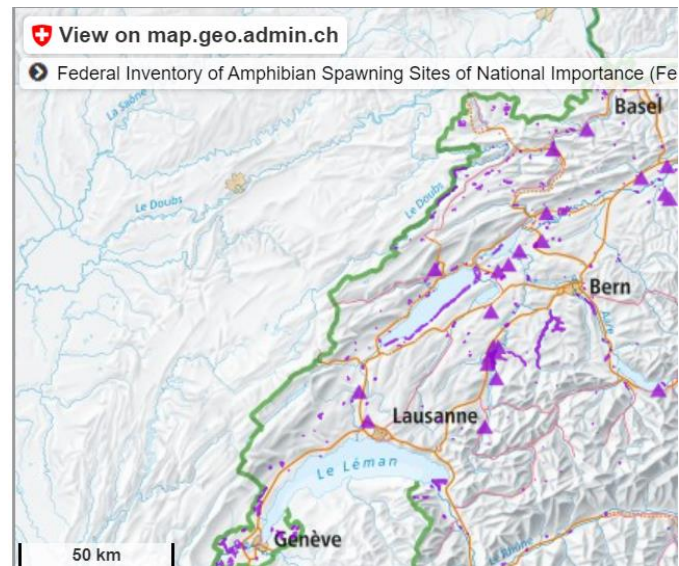

## Description

Geo.admin.ch is the geodata platform of the Swiss Confederation. Users can directly access federal geographical data. The coordination of geographical data within the Federal Administration is under the strategic direction and management of the coordinating agency for Federal geographical information, GCG. The portal is an important and necessary step in the implementation of the GeoIG. Basic geodata are rapidly available over the Internet, in a clearly structured and complete form.

## Benefits

The platform provides data and information that is especially resourceful for researchers investigating topics around geospatial data.

## How open data is used

Geo.admin.ch is the practical implementation of the Geoinformation Act (GeoIG). This platform enables the exchange and use of geodata, based on the Federal spatial data infrastructure. This platform is being continually updated with additional datasets and functions. This includes geodata search/catalogue and viewing and extension to a federal distribution portal for geodata and services.
